DETAILED ACTION

Allowable Subject Matter

Claims 1-24 are allowed.

Reason for Allowability

The following is an examiner's statement of reasons for allowance: in combination with other limitations recited in the claims, the primary reason for the allowance is the including the following inventive features of a stator core having a plurality of bridges (36), each of which connects between radially inner ends of corresponding two of the plurality of iron core portions, wherein: each bridge of each inner core sheet includes a thin wall portion (37 in figs 3-4), which extends in a circumferential direction of the stator and has a smaller axial thickness in a direction parallel to the axial direction of the stator in comparison to the rest of the inner core sheet; a circumferential angular extent (b, c, d in fig 4) of at least one of the thin wall portions (37b, 37c, 37d in fig 4) of the plurality of bridges differs from that of at least another one of the thin wall portions of the plurality of bridges in each inner core sheet.

Comparing to the prior-art of the record, the Examiner concurs with the applicant that **Nishikawa et al (JP-09-019089)** does disclose the thin wall portions but not the circumferential angular extension of the thin wall portions of the plurality of bridges differs from that of at least another one of the thin wall portions of the plurality of bridges in each inner core sheet.

Thus, none of the prior art references of the record, either stand-alone or in combination, has taught or suggest the above-mentioned features in combination with other limitations recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
